Product Overview

The EPNT-4 is Poynting's newly added omni-directional, customer-premises equipment (CPE). The EPNT-4 offers a variety of antennas in one package, such as 4x4 5G/LTE MIMO, 2x2 Wi-Fi MIMO, as well as an additional GPS antenna. The cellular 5G/LTE antennas are wideband and operate from 617 to 4200 MHz, covering the major 5G/LTE bands with excellent gain across all frequencies, enhancing the 5G performance features, such as multi carrier aggregation (CA) for communication. While the Wi-Fi antennas offer dual band operation and cover the 2.4 GHz and 5 to 7.2 GHz Wi-Fi bands with a peak gain of 5 dBi. In addition, the antenna elements within the enclosure are cross-polarised, further improving the overall performance of the antenna. The combination of our cellular and Wi-Fi antennas, with a router will deliver a CPE with exceptional performance along with increased data throughput.

The EPNT-4 is also fully saltwater protected, so that it can be used in highly corrosive environments, including chemical and toxic environments, thanks to the UV stable ASA radome material. The enclosure also offers a robust mechanical design to withstand adverse weather conditions, making the EPNT-4 vandal and weatherproof with an IP67 & IK10 rating.

Antenna Performance Plots - Cellular

VSWR: Cellular Antenna

Voltage Standing Wave Ratio (VSWR)*

VSWR is a measure of how efficiently radio-frequency power is transmitted from a power source, through a transmission line, into a load. In an ideal system, 100% of the energy is transmitted which corresponds to a VSWR of 1:1.

The EPNT-4 delivers superior performance across all bands with a VSWR of <3:1.

*VSWR measured without a cable.
