

Milesight

AI ToF People Counting Sensor

Featuring LoRaWAN®

VS133

User Guide

Safety Precautions

Milesight will not shoulder responsibility for any loss or damage resulting from not following the instructions of this operating guide.

- ❖ Though the device is compliant with Class 1 (IEC/EN 60825-1:2014), please **DO NOT** look at the ToF sensor too close and directly.
- ❖ The device must not be disassembled or remodeled in any way.
- ❖ To avoid risk of fire and electric shock, do keep the product away from rain and moisture before installation.
- ❖ Do not place the device where the temperature is below/above the operating range.
- ❖ **Do not touch the device directly to avoid the scalds when the device is running.**
- ❖ The device must never be subjected to shocks or impacts.
- ❖ Make sure the device is firmly fixed when installing.
- ❖ Do not expose the device to where laser beam equipment is used.
- ❖ Use a soft, dry cloth to clean the lens of the device.

Declaration of Conformity

VS133 is in conformity with the essential requirements and other relevant provisions of the CE, FCC, and RoHS.

1. Product Introduction

1.1 Overview

VS133 is a sensor that uses second-generation ToF technology to accurately count people. This technology provides more precise depth maps and longer detection distances while maintaining an excellent privacy protection rate. The advanced ToF technology combined with an AI algorithm enables the sensor to handle complex scenes and distinguish non-human objects with up to 99.8% accuracy. VS133 sensor can be used in conjunction with the Milesight LoRaWAN® gateways and the Milesight IoT Cloud. With easy installation, VS133 sensors are ideal for entrances or corridors in retail stores, malls, offices, subways, and other locations.

1.2 Key Features

- Up to 99.8% accuracy combining the 2nd generation ToF technology and AI algorithm
- Allow to collect people counting data by differentiating between children and adults and detecting staffs via identification features for clearer people analysis
- Wider field angle to obtain longer-distance depth maps and cover a larger area
- Working well even in low-light or completely dark environments with great lighting adaptability
- Free from privacy concerns without image capturing
- Smart U-turn counting to filter redundant counting of people wandering in the area
- Store one million counting data locally and securely
- Easy configuration via Wi-Fi for web GUI configuration
- Function well with standard LoRaWAN® gateways and network servers
- Quick and easy management with Milesight IoT Cloud

2. Hardware Introduction

2.1 Packing List

1 × VS133 Device

4 × Ceiling Mounting Kits

1 × Mounting Sticker

8 × Staff Tags

1 x Power Adapter

1 x
Warranty Card

1 x
Quick Guide

1 x VB01 Multifunctional
Bracket Kit (Optional)

8 x Staff Lanyards
(Optional)

! If any of the above items is missing or damaged, please contact your sales representative.

2.2 Hardware Overview

2.3 Button and LED Indicators

| Function | Action | LED Indication |
|--------------------------|---|--|
| Turn On/Off Wi-Fi | Press and hold the button for more than 3 seconds. | Blue blinks 3s Wi-Fi on: Blue on Wi-Fi off: Green on |
| Reset to Factory Default | Press and hold the reset button for more than 10 seconds. | Green Blinks. |

2.4 Dimensions (mm)

3. Power Supply

VS133 can be powered by power adapter (12VDC, 2A).

4. Access the Sensor

VS133 provides user-friendly web GUI for configuration and users can access it via Wi-Fi connection. The recommended browsers are Chrome and Microsoft Edge. The default IP of Wi-Fi is **192.168.1.1**, and default SSID is **People Counter_XXXXXX** (can be found on the label).

Step 1: Power on the device.

Step 2: Enable the Wireless Network Connection on your computer and search for corresponding access point, then connect computer to this access point.

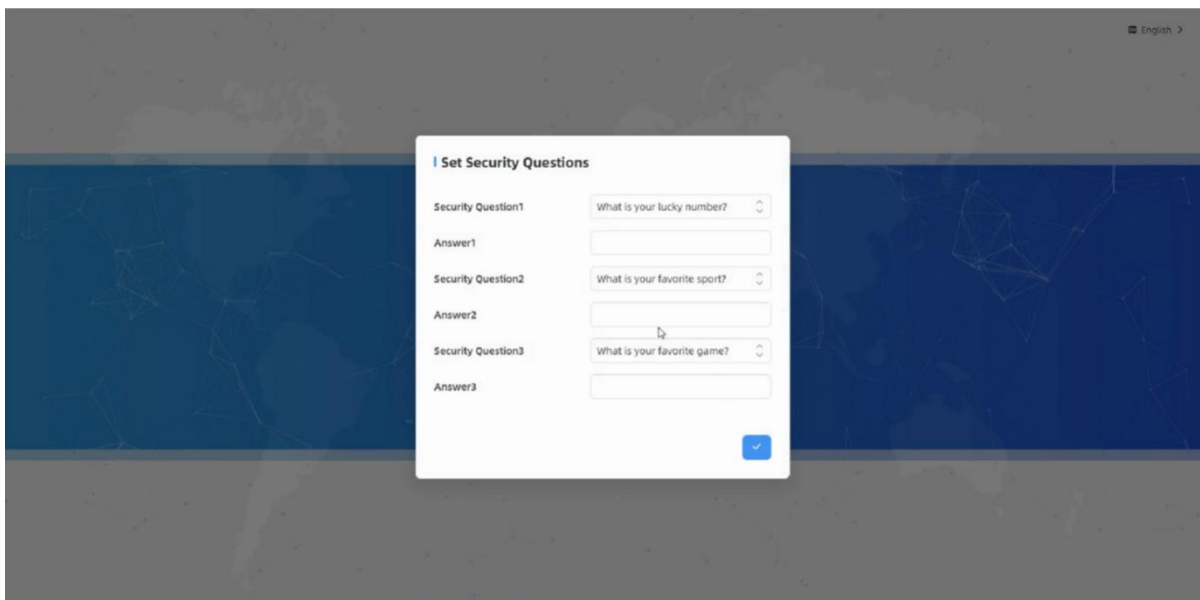

Step 3: Open the Browser and type 192.168.1.1 to access the web GUI.

Step 4: Select the language.

Step 5: Users need to set the password and three security questions when using the sensor for the first time (three questions can be skipped by refreshing webpage). After configuration, log in with username (admin) and custom password.

Note:

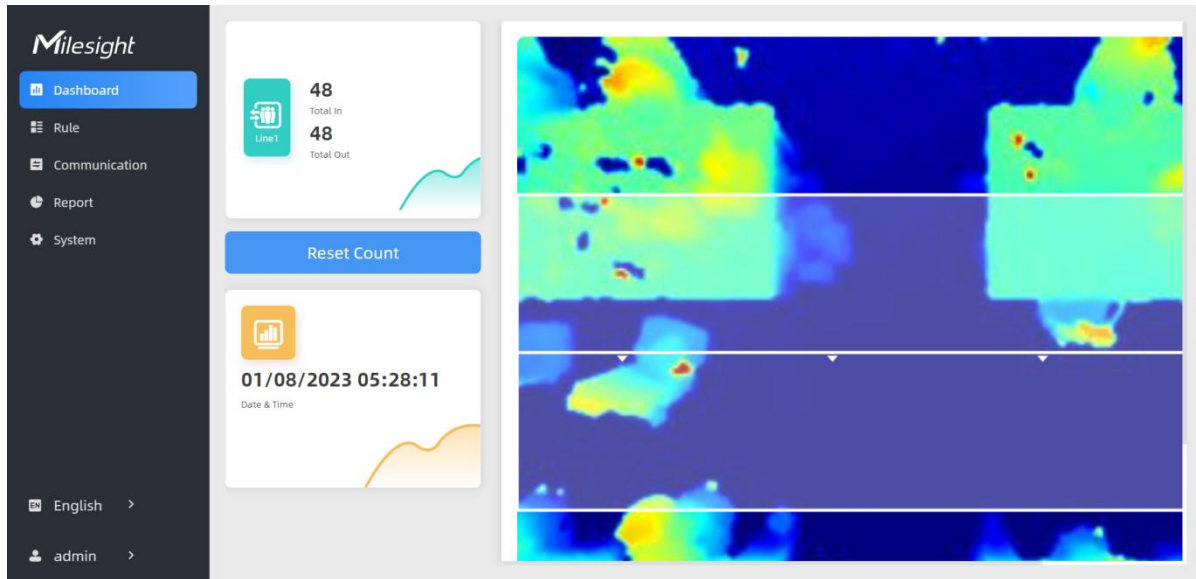

- 1) Password must be 8 to 16 characters long, which contains at least two kinds or more in combination with numbers, lowercase letters, uppercase letters and special characters .
- 2) You can click the "forgot password" in login page to reset the password by answering three security questions when you forget the password if you set the security questions in advance.

5. Operation Guide

5.1 Dashboard

After logging on to the device web GUI successfully, user is allowed to view live video as follows.

| Parameters | Description |
|-------------|---|
| Reset Count | Clear accumulated entrance and exit people counting values. |
| Track | When enabled, there is tracking line when people pass the detection area. |

5.2 Rule

Draw Detection Lines

Users can draw detection lines to record the people count values which indicate the number of people enter or exit.

Step 1: Click **Draw Detection Lines**.

Step 2: Left-click to start drawing and drag the mouse to draw a line, left-click again to continue drawing a different direction edge and right-click the mouse to complete the drawing. The line can be dragged to adjust the location and length. One device supports at most 4 broken lines with maximum 4 segments each.

Step 3: If users need to delete the line, click **Draw Detection Lines** and select the line which need to be deleted, then click **Clear This Line** or click **Clear All**.

Note:

1) The arrow direction of the detection line depends on your drawing direction.

2) Ensure that the detected target can pass through the detection line completely. It's recommended that the detection line is perpendicular to the In/Out direction and on the center of the detection area without other objects around.

3) A redundant identification area needed to be left on both sides of the detection line for the target. This is to ensure that the sensor has stable recognition and tracking of this target before it passes the detection line, which will make the detection and count more accurate.

Rule Configuration

Users can set the rules to ensure accurate counting.

Deployment Parameters

| | | |
|--|-----------------------------------|---------------------------------------|
| Installation Height <small>mm(2000~3500)</small> | <input type="text" value="3500"/> | <input type="button" value="Detect"/> |
| Max. Target Height <small>mm(500~3000)</small> | <input type="text" value="2000"/> | |
| Min. Target Height <small>mm(500~3000)</small> | <input type="text" value="1000"/> | |
| Child Filter Height <small>mm(500~3000)</small> | <input type="text" value="1300"/> | |

Counting Strategy

| | |
|-------------------------------------|-------------------------------------|
| U-turns Filtering | <input checked="" type="checkbox"/> |
| Draw U-turns Areas <small>①</small> | <input type="button" value="Draw"/> |
| Children Distinction | <input checked="" type="checkbox"/> |
| Staff Detection <small>①</small> | <input type="checkbox"/> |

Report Strategy

| | |
|-----------------------------------|---|
| Periodic Report | <input checked="" type="checkbox"/> |
| Period <small>min(1~1080)</small> | <input type="text" value="10"/> <input type="button" value="x"/> <input type="button" value="✓"/> |

| Parameters | Description |
|---------------------|--|
| Installation Height | Set the device installation height. Click Detect to detect the current installation height automatically. Note: Dark floor/carpet (black, grey, etc.) does not support to detect the installation height automatically. |
| Max. Target Height | Set the maximum target height, then the device will ignore the objects higher than this setting value. |
| Min. Target Height | Set the minimum target height, then the device will ignore the object shorter than this setting value. |
| Child Filter Height | Set the max child height when children distinction feature is enabled. |
| U-turns Filtering | When enabled, it allows to draw an area for every line and the device will count the In and Out values only when people pass this area. Users can left-click to start the drawing and add edges for this area, then right-click to stop drawing. |

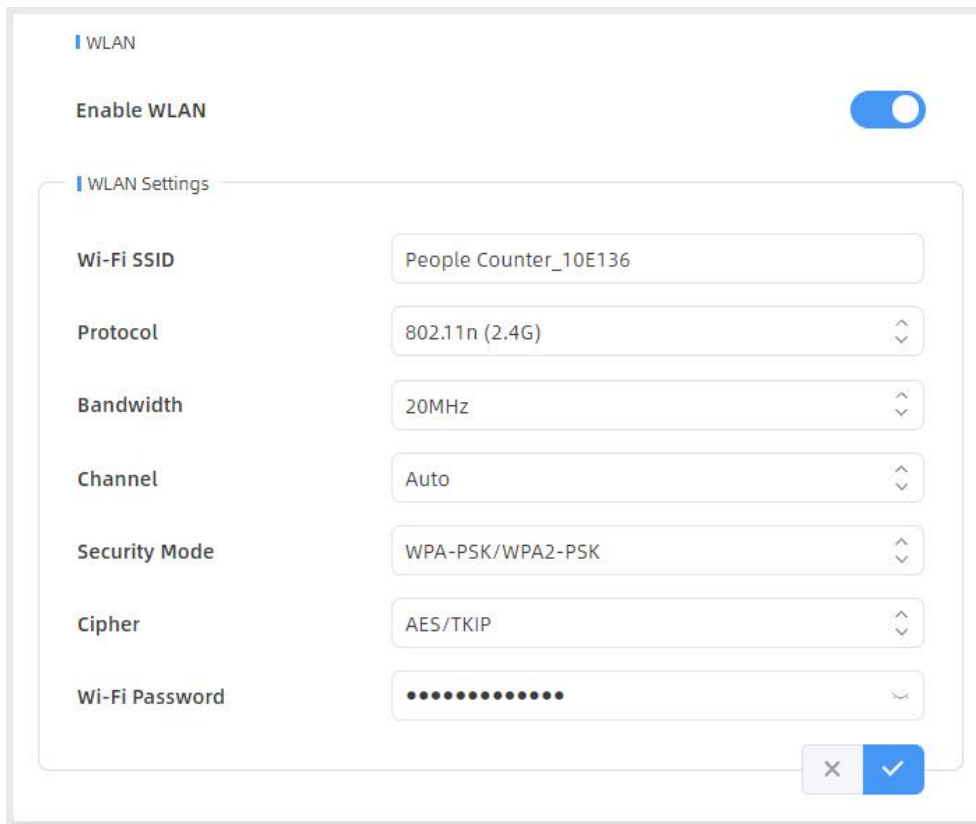

| | |
|----------------------|---|
| Children Distinction | The device will detect the people shorter than child filter height as children. |
| Staff Detection | The device will detect the people who wear reflective stripes as staff tags on the visible parts (neck, shoulders, etc.) as staffs. Reflective stripe requirements: width > 2cm, 500 cd/lux.m ² |
| Periodic Report | Report the people counting data periodically. |
| Period | Set the period of reporting periodic report. Range: 1-1080 mins, default: 10 mins |

Note: Due to the error in ToF distance measurement (0.035 m), the Max. Target Height should be set as maximum pedestrian height plus 0.035 m and the Min. Target Height as minimal pedestrian height minus 0.035 m in the actual applications. For example, if the pedestrian height is 1.6 m to 1.8 m, the Max. and Min. Target Height should be configured as 1.835 m and 1.565 m respectively.

5.3 Communication

5.3.1 WLAN

VS133 supports wlan feature to work as AP mode to configure device and it can not connect to other access point.

| Parameters | Description |
|-------------|--|
| Enable WLAN | Enable or disable Wi-Fi feature. If disabled, users can use button or LoRaWAN® |

| | |
|----------------|---|
| | downlink command to enable it. |
| Wi-Fi SSID | The unique name for this device Wi-Fi access point. |
| Protocol | 802.11b (2.4 GHz), 802.11g (2.4 GHz), 802.11n (2.4 GHz) are optional. |
| Bandwidth | 20 MHz or 40 MHz are optional. |
| Channel | Select the wireless channel. Auto, 1,...11 are optional. |
| Security Mode | No Encryption, WPA-PSK, WPA2-PSK and WPA-PSK/WPA2-PSK are optional. |
| Cipher | AES, TKIP, AES/TKIP are optional. |
| Wi-Fi Password | Customize the password when security mode is not No Encryption. |

5.3.2 LoRa

LoRa settings are used for configuring the transmission parameters in LoRaWAN® network.

Device LoRa Info.

LoRa Status De-activated

Device EUI 24E1246936202833

LoRa Working Mode
 Confirm Mode
 ADR

| Parameters | Description |
|-------------------------|---|
| LoRa Status | LoRaWAN® network joining status of this device. |
| Device EUI | Unique ID of the device, which can also be found on the label. |
| App EUI | The Default App EUI is 24E124C0002A0001. |
| Application Port | The port used for sending and receiving data, default port is 85. |
| Join Type | OTAA and ABP mode are available. |
| Application Key | Appkey for OTAA mode, the default key is 5572404C696E6B4C6F52613230313823. |
| Device Address | DevAddr for ABP mode, the default address is the 5 th to 12 th digits of SN. |
| Network Session Key | Nwkskey for ABP mode, the default key is 5572404C696E6B4C6F52613230313823. |
| Application Session Key | Appskey for ABP mode, the default key is 5572404C696E6B4C6F52613230313823. |
| Rejoin Mode | <p>Reporting interval ≤ 35 mins: the device will send a specific number of LinkCheckReq MAC packets to the network server every reporting interval or every double reporting interval to validate connectivity; If there is no response, the device will re-join the network.</p> <p>Reporting interval > 35 mins: the device will send a specific number of LinkCheckReq MAC packets to the network server every reporting interval to validate connectivity; If there is no response, the device will re-join the network.</p> |

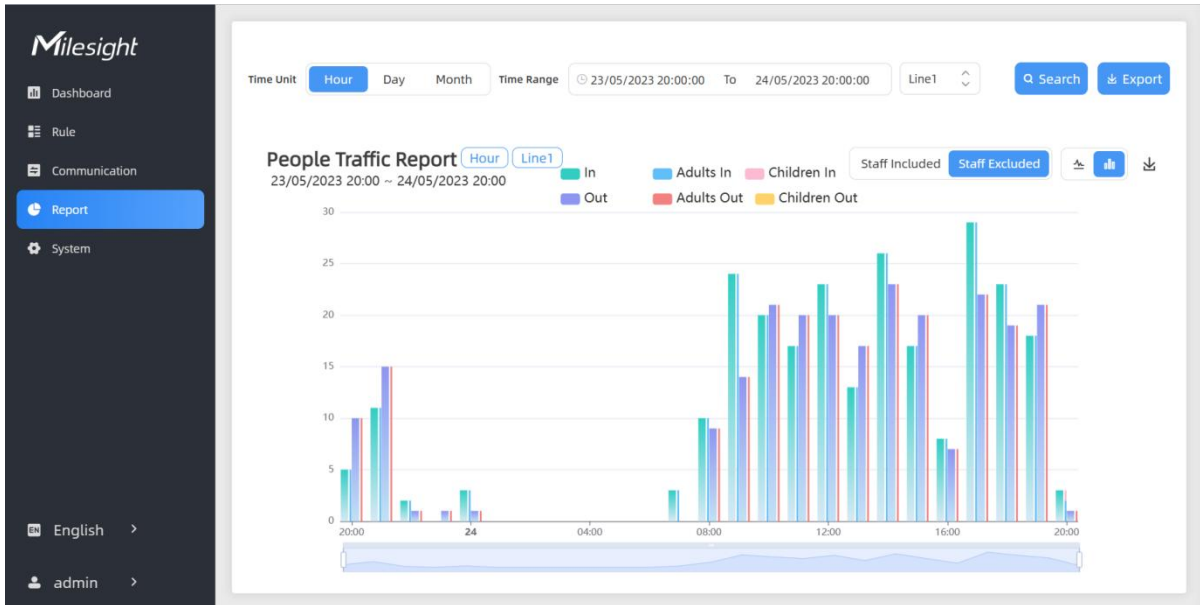

| | |
|---------------------|---|
| Number of Detection | When rejoin mode is enabled, set the number of detection. Note: the actual sending number is Number of Detection + 1 . |
| LoRaWAN® Version | V1.0.2, V1.0.3 are available. |
| Region | Frequency plan of this device. |
| RX2 Data Rate | RX2 data rate to receive downlinks. |
| RX2 Frequency | RX2 frequency to receive downlinks. |
| Spreading Factor | If ADR is disabled, the device will send data via this spreading factor. |
| Channel | Select the channel from channel list or enter the index to select the frequency channel. Index examples: 1, 40: Enabling Channel 1 and Channel 40 1-40: Enabling Channel 1 to Channel 40 1-40, 60: Enabling Channel 1 to Channel 40 and Channel 60 All: Enabling all channels Null: Indicates that all channels are disabled |
| Confirm Mode | If the device does not receive ACK packet from network server, it will resend data once. |
| ADR | Allow network server to adjust data rate of the device. |

Note:

- 1) Please contact sales for device EUI list if there are many units.
- 2) Please contact sales if you need random App keys before purchase.
- 3) Only OTAA mode supports rejoin mode.
- 4) Select OTAA mode when you connect device to Milesight IoT Cloud.

5.4 Report

VS133 supports to generate visual line chart or bar chart to display the people traffic and supports to export the report. Before using this feature, **ensure that the device time is correct on System page.**

| Parameters | Description |
|-------------------------|---|
| Time Unit | Select the unit to generate the graph or export the data. |
| Time Range | Select the time range to generate the graph. |
| Line1 | Select the line to display the graph. |
| Search | Click to generate the graph according to the time range and line option. |
| Export | Export the historical traffic data as CSV file according to the selected time unit. |
| Staff Included/Excluded | Select whether to contain staff counting values on the graph. |
| | Select the display type as line or bar. |
| | Download the graph screenshot. |

5.5 System

5.5.1 Device Info

All information about the hardware and software can be checked on this page.

Import Config File

Import

| Parameters | Description |
|----------------------|--|
| Frequency Adjustment | Adjust the ToF frequency modulation mode to avoid the interference of surrounding IR devices. Please avoid using the same mode if there are multiple VS133 devices around. Note: if there is only one option, please contact Milesight IoT support: iot.support@milesight.com |
| Reset | Recovery device basic configuration: keep the IP settings and user information when resetting. Recovery device to factory settings: reset device to factory default, which needs to verify admin password. |
| Reboot | Restart the device immediately. |
| Upgrade | Click the folder icon and select the upgrading file, then click the Upgrade button to upgrade. The update is done when the system reboots successfully. Note: The upgrade process takes about 1-10 minutes. Do not turn off the power and complete automatic restart after the upgrade. |
| Backup and Restore | Export Config File: Export configuration file. Import Config File: Click the file icon and select the configuration file, click Import button to import configuration file. |

6. Installation Instruction

Parameter definition:

| Parameters | Explanation | Value |
|------------|-------------------------------------|---------------|
| H | Installation height | ≤3.5 m |
| d | Minimum detection distance of VS133 | 0.5 m |
| Δd | Distance measurement error of VS133 | 0.035 m |
| h_{max} | Maximum pedestrian height | Example 1.8 m |
| h_{min} | Minimum pedestrian height | Example 1.7 m |
| α | ToF horizontal field of view angle | 98° |
| β | ToF vertical field of view angle | 80° |
| x | Length of detection range | |
| y | Width of detection range | |

6.1 Installation Height

The maximum installation height is 3.5 m and the minimum installation height is $h_{max}+d+\Delta d$. For

example, when the maximum pedestrian height is 1.8 m, then the minimum installation height is $1.8+0.5+0.035=2.335$ m.

6.2 Covered Detection Area

The detection area covered by the device is related to the field of view angle of the device, the installation height and the target height. The length of the detection area is approximately $x=2.300 \times (H-h_{min})$ and the width of the detection area is approximately $y=1.678 \times (H-h_{min})$.

For example, if the Minimum height of pedestrians is 1.7 m, the detection area corresponding to each installation height is as follows:

| Installation Height | FoV Monitored Area (m) | Detection Area (m) |
|---------------------|------------------------|--------------------|
| 2.5 | 5.75 × 4.20 | 1.84 × 1.34 |
| 2.6 | 5.98 × 4.36 | 2.07 × 1.51 |
| 2.7 | 6.21 × 4.53 | 2.30 × 1.68 |
| 2.8 | 6.44 × 4.70 | 2.53 × 1.85 |
| 2.9 | 6.67 × 4.87 | 2.76 × 2.01 |
| 3.0 | 6.90 × 5.03 | 2.99 × 2.18 |
| 3.1 | 7.13 × 5.20 | 3.22 × 2.35 |
| 3.2 | 7.36 × 5.37 | 3.45 × 2.52 |
| 3.3 | 7.59 × 5.54 | 3.68 × 2.69 |
| 3.4 | 7.82 × 5.71 | 3.91 × 2.85 |
| 3.5 | 8.05 × 5.87 | 4.14 × 3.02 |

6.3 Environment Requirements

- Dark floor/carpet (black, grey, etc.) will affect the device to count staffs when Staff Detection is enabled.

- Avoid 940nm light which may result in incorrect counting.
- Outdoor sunlight shining on the over channel will not have any effect, but the mirrored reflections that allow sunlight to shine on the ToF Sensor should be avoided.

6.4 Installation

Ceiling Mount

Step 1: Ensure the thickness of the ceiling is more than 30 mm, then attach the mounting sticker to the ceiling and drill 4 holes with a diameter of 6mm. If the wire needs to be extended to the interior of the ceiling, a wire hole with a suitable size is also required to be drilled.

Step 2: Fix the wall plugs into the ceiling holes.

Step 3: Remove the cover on the device, and then connect all required wires and pass them through the wire hole behind the device or block on the side of the device if the wires need to be protruded from the side of the device.

Step 4: Fix the device to the wall plugs via mounting screws; remember to adjust the mounting direction according to the detection area requirement.

Step 5: Fix the cover back to the device.

Ceiling/Lintel Mount (with Optional VB01 Multifunctional Bracket)

Step 1: Attach the mounting plate to the device with 4 screws.

Step 2: Fix the pole to the mounting plate with the hole on the plate.

Step 3: Adjust the length of the pole, then adjust the direction of 3-axis ball and tighten it with the handle.

Step 4: Determine the mounting location and drill 3 holes, fix the wall plugs into the mounting holes, then fix the bracket base to the wall plugs via mounting screws.

(Note: If the wire needs to be extended to the interior of the ceiling or wall, a wire hole with a suitable size is also required to be drilled.)

Step 5: Remove the cover on the device, and then connect all required wires and pass them through the inside of pole.

Step 6: Fix the pole to bracket base with screws and nuts.

Note:

- Tilt installation should be avoided. Ensure that the front of the device and the ground plane

are paralleled.

- Avoid installing the device against the wall and ensure that the device keeps away from the wall at least 30 cm on the short side and 50 cm on the long side.

- Ensure that there are no other objects blocking the ToF light within a 30 cm radius of the front of the device.
- When you install devices on the top of swinging doors, it is suggested to keep the door normally open. If the door must be normally closed, please install the device on the other side of the door to keep away from the door movement. And it is suggested to keep away from the door with a distance of at least 30 cm.

6.5 Factors Affecting Accuracy

- Wearing a fisherman's hat or carrying a cardboard box on the shoulder: The target will not be recognized because it will become unlike a human in depth map.
- Handheld or cart-carrying a humanoid doll with sufficient height to pass by: The doll will be mistakenly detected as people because it is human-like in depth map.

7. Communication Protocol

7.1 Uplink Data

VS133 reports basic information of sensor whenever joining the network and the number of people periodically. For decoder examples please find files on <https://github.com/Milesight-IoT/SensorDecoders>.

| Channel | Type | Description |
|---------|-----------------------|-------------|
| ff | 01 (Protocol Version) | 01=> V1 |

| | | |
|----|--------------------------|---|
| | 09 (Hardware Version) | 01 04 => V1.4 |
| | 16 (Device SN) | 16 digits |
| | 1f (Software Version) | 1f 07 00 4b => V31.7.0.75 |
| 03 | d2 (Accumulated counter) | Line 1 accumulated in counter, 4 bytes |
| 04 | d2 (Accumulated counter) | Line 1 accumulated out counter, 4 bytes |
| 05 | cc (Periodic counter) | Line 1: Byte 1-2: in counter during the report interval Byte 3-4: out counter during the report interval |
| 06 | d2 (Accumulated counter) | Line 2 accumulated in counter, 4 bytes |
| 07 | d2 (Accumulated counter) | Line 2 accumulated out counter, 4 bytes |
| 08 | cc (Periodic counter) | Line 2: Byte 1-2: in counter during the report interval Byte 3-4: out counter during the report interval |
| 09 | d2 (Accumulated counter) | Line 3 accumulated in counter, 4 bytes |
| 0a | d2 (Accumulated counter) | Line 3 accumulated out counter, 4 bytes |
| 0b | cc (Periodic Counter) | Line 3: Byte 1-2: in counter during the report interval Byte 3-4: out counter during the report interval |
| 0c | d2 (Accumulated counter) | Line 4 accumulated in counter, 4 bytes |
| 0d | d2 (Accumulated counter) | Line 4 accumulated out counter, 4 bytes |
| 0e | cc (Periodic Counter) | Line 4: Byte 1-2: in counter during the report interval Byte 3-4: out counter during the report interval |

Note: If children distinction feature or staff detection feature is enabled, the counter uplinks will minus children and staff. For example, if children distinction is enabled, the accumulated in counter=total in counter-children in, the accumulated out counter=total out counter-children out.

Example:

2. Line 1 People counter

| 03d205000000 04d203000000 05cc02000100 | | | | | |
|--|-----------------------------------|--|---------|------------------------------------|------------------------------------|
| Channel | Type | Value | Channel | Type | Value |
| 03 | d2 (accumulated in counter) | 05 00 00 00 => 00 00 00 05=5 | 04 | d2 (accumulated out counter) | 03 00 00 00 => 00 00 00 03=3 |
| Channel | Type | Value | | | |
| 05 | cc (Periodic Counter) | In: 02 00 => 00 02 = 2 Out: 01 00 => 00 01 =1 | | | |

7.2 Downlink Command

VS133 supports to configure the device via downlink commands. Application port is 85 by default.

| Channel | Type | Description | |
|---------|----------------------------|---|-------------------------|
| ff | 10 (Reboot) | ff (Reserved) | |
| | 03 (Reporting Interval) | 2 Bytes, unit: s | |
| | 04 (Confirm Mode) | 00: disable, 01: enable | |
| | 05 (LoRaWAN® Channel Mask) | Byte 1: Channel index range 01: 0-15 02: 16-31 03: 32-47 04: 48-63 05: 64-79 06: 80-95 Byte 2-3: indicate disable or enable via every bit, 0=disable, 1=enable | |
| | | 40 (ADR) | 00: disable, 01: enable |
| | | 41 (Application Port) | 1 Byte, default is 85 |
| | | 42 (Wi-Fi) | 00: disable, 01: enable |
| | | 43 (People Counting Periodic Report) | 00: disable, 01: enable |
| | | 51 (Clear the accumulated | ff (Reserved) |

| | | |
|--|-----------|--|
| | counting) | |
|--|-----------|--|

Note: After changing any parameter of LoRaWAN® settings, the device will re-join the network.

Example:

1. Disable Wi-Fi.

| ff4200 | | |
|---------|------------|-------------|
| Channel | Type | Value |
| ff | 42 (Wi-Fi) | 00: disable |

2. Set AU915 or US915 channel mask as 8-15.

| ff0501ff00 ff05020000 ff05030000 ff05040000 ff05050000 | | |
|--|--------------------------|---|
| Channel | Type | Value |
| ff | 05 (Set Channel Mask) | 01: Channel index 0-15, ff00 => 8-15 is enabled 02-05: Channel index 16-79, 0000 => all disabled |

3. Reboot the device.

| ff10ff | | |
|---------|-------------|---------------|
| Channel | Type | Value |
| ff | 10 (Reboot) | ff (Reserved) |

4. Set reporting interval as 20 minutes.

| ff03b004 | | |
|----------|----------------------------|---------------------------------------|
| Channel | Type | Value |
| ff | 03(Set Reporting Interval) | b0 04 => 04 b0 = 1200s =20 minutes |
